Experiment - 13
Own PING Program

AIM:

To implement a simple ping program using socket programming and verify the reachability of a destination host.

PROCEDURE:

1. Create a program to accept a destination IP address / hostname.
2. Create a socket for network communication.
3. Generate an ICMP Echo Request.
4. Send the request to the destination.
5. Wait for an ICMP Echo Reply.
6. Calculate the response time.
7. Display whether the host is reachable.
8. Repeat the process for multiple requests.
9. Display packet transmission statistics.

Sample Output:

Enter destination : 8.8.8.8
PING 8.8.8.8
Reply from 8.8.8.8:
Sequence = 1 Time = 24 ms
Reply from 8.8.8.8:
Sequence = 2 Time = 23 ms
Reply from 8.8.8.8:
Sequence = 3 Time = 25 ms

Packets Sent : 3
Packets Received : 3
Packet loss : 0%.

Result:

Thus, a simple Ping program was successfully implemented and the reachability of the destination host was verified.
